

REGULATORY REQUIREMENTS

Government records for control review, built from field facts.

Government and Public-Sector Technology Records for Control Review

Field-verified owner-side records for municipal buildings, agencies, public authorities, courts, libraries, public safety facilities, and federally influenced environments.

Owner-side record - not a certification.

Factual source material for audit, legal, compliance, engineering, IT, security, and vendors.

Why it matters

Support NIST-informed control review, audit trails, procurement, and continuity planning.

Reconcile public-facing, restricted, law-enforcement, records, and equipment-room areas.

Give oversight teams records independent of any single vendor service-note trail.

Technology records to verify

Access, video +
alarm systems

MDF/IDF + network
backbone context

BMS/BAS/OT +
remote gateways

Restricted areas +
legacy systems

Regulatory-review inputs

- NIST control-family facility context
- Controlled rooms, closets, and cabling paths
- Procurement, change-control, and modernization records
- Cyber-physical system domain boundaries

Owner-ready deliverables

- System inventory and floorplan overlays
- Technology room and riser context
- Vendor / platform matrix and support boundaries
- Exceptions, lifecycle flags, and owner package

Best fit

Municipal buildings + agencies

Courts, libraries + authorities

Public safety + federally influenced
